

TBI Dashboard: The information you need – when it matters most

Traumatic brain injury (TBI) patients present a unique set of challenges. Early treatment is critical, as additional secondary injury occurs often after the initial event.¹

ZOLL introduces the TBI Dashboard, providing the information rescuers need to effectively manage TBI patients and follow the TBI protocol recommended in the Excellence in Prehospital Injury Case Study (EPIC).¹

MANAGEMENT OF AIRWAY OXYGENATION

Prevention, identification and treatment of hypoxia is a major emphasis

MANAGEMENT OF VENTILATION

Special emphasis is placed on identifying and treating hypoventilation as well as preventing hyperventilation when assisting ventilation.

MANAGEMENT OF BLOOD PRESSURE

Treatment of hypotension
Treatment of hypertension

TBI Dashboard on X Series Advanced helps teams effectively manage TBI patients by providing the data they need every step of the way – on the scene, during transport, and post-event.
